1. About the Programme

OneGrasp is a globally recognized educational platform that empowers school students from Class 6 to Class 12 to participate in genuine scientific research, present their work at International Scientific Conferences, and earn a permanent Digital Object Identifier (DOI) for their published abstract — all before they reach university.

The Student Research Programme bridges the gap between classroom learning and real-world research. It gives every student a structured pathway — from selecting a meaningful topic to publishing and presenting findings to a global academic audience.

■	**For Students** Class 6 to Class 12 — Any Board, Any School	■	**Global Platform** International Scientific Conference — Online & Hybrid
■	**DOI Publication** Permanent Academic Record via Crossref	■	**Certification** CPD-recognized Certificate of Participation / Presentation
■	**11 Disciplines** Business, Health, Engineering, Education, Sciences & more	■	**100+ Topics** Beginner to Advanced — curated for every grade level

2. Why Research? The OneGrasp Advantage

1 Access to 170 Million Metadata Records

Students in Class 11 and 12 can search what actual scientists have written about their topic through the Meta Research Hub — a 170-million-document academic database.

2 Permanent Digital Footprint with DOI

A DOI means the student's work lives forever on the internet — searchable by researchers worldwide. This looks exceptional on any university application or CV.

3 International Visibility

Published abstracts are indexed on Google Scholar, Journal Citation Index, ResearchHub, and MetaHub, giving students genuine cross-platform academic presence.

4 Conference Presentation Experience

Students learn to structure, present, and defend their research — skills that translate directly into college interviews, professional presentations, and academic confidence.

5 Profile Boost for University Admissions

A Certificate of Participation with a DOI-linked abstract distinguishes students dramatically from peers in both domestic and international university applications.

6 Guided Research Structure

The 5-step OneGrasp process makes research accessible — students don't need prior experience. The programme scaffolds everything from topic selection to final presentation.

3. Publication & Recognition Benefits

Every student who successfully completes the programme receives the following internationally recognized benefits:

- **DOI via Crossref**
  Your paper gets a permanent, citable DOI that lives forever on the internet. It makes your work findable and quotable by researchers worldwide.
- **Google Scholar**
  Your abstract becomes immediately discoverable by researchers worldwide through Google Scholar — the most widely used academic search engine.
- **Meta Research Hub**
  Your work becomes part of a 170 million document academic database — the same repository used by professional scientists and university researchers.
- **Journal Citation Index**
  Inclusion in the Journal Citation Index boosts your academic credibility significantly and demonstrates the quality of your research.
- **CPD**
  A CPD (Continuing Professional Development) Intelliminded certification — a recognized professional development credential accepted globally.
- **ResearchHub / MetaHub**
  Cross-platform academic visibility through ResearchHub and MetaHub, ensuring your research reaches the widest possible academic audience.

4. Five Simple Steps — From Idea to DOI

The OneGrasp research journey is structured into five clear stages. Each step builds on the previous one, guiding students from initial interest to international publication.

STEP 1 **Topic Selection**	Students select a research topic from the 11 Academic Disciplines (e.g., Business, Technology, Health, Education, or Life Sciences). ***Goal:*** *Align the research with the student's interest and grade level (Class 6–12).*
STEP 2 **Abstract Submission**	Students write a 250-word summary (Abstract) of their research idea or experiment. The abstract covers the problem statement, proposed methodology, and expected results. ***Goal:*** *Clear problem statement, methodology, and expected results — formatted for DOI publishing.*
STEP 3 **Peer Review & Selection**	The OneGrasp scientific committee reviews the submitted abstract for quality, originality, and academic soundness. ***Goal:*** *Once approved, the student receives an official Acceptance Letter.*
STEP 4 **Presentation & DOI Issuance**	Students present their research at the International Scientific Conference (Online or Hybrid). The abstract is simultaneously published in the conference proceedings with a unique DOI. ***Goal:*** *A permanent, searchable entry in global scientific records — discoverable forever.*
STEP 5 **Certification**	Students receive a Certificate of Participation / Presentation from OneGrasp, recognized internationally and by CPD Intelliminded. ***Goal:*** *Strengthens the student's profile for domestic and international university admissions.*

5. The 11 Research Disciplines

Students may choose any one of the following 11 disciplines. Each contains multiple subcategories and research topics suited to different class levels.

1	■ **Business & Economics**	Entrepreneurship, Finance, Consumer Behavior, Markets & Trade
2	■ **Health & Medical Sciences**	Nutrition, Mental Health, Epidemiology, Public Health, Disease & Immunity
3	■ **Engineering & Technology**	AI & Robotics, Renewable Energy, Civil Engineering, Electronics, Simple Machines
4	■ **Education**	Learning Methods, EdTech, Inclusive Education, Curriculum & Assessment, Teacher Effectiveness
5	■ **Physical & Life Sciences**	Biology, Chemistry, Physics, Ecology, Genetics, Environmental Science
6	■ **Social Sciences & Humanities**	Sociology, Psychology, History, Civics, Geography, Political Science
7	■ **Agriculture & Food Sciences**	Organic Farming, Food Technology, Agri-Tech, Soil Science, Crop Science
8	■ **Interdisciplinary & Emerging Fields**	AI & Ethics, Climate Science, Biotechnology, Space Exploration, Circular Economy
9	■ **Mathematics & Data Science**	Statistics, Data Analysis, Probability, Algebra, Machine Learning
10	■ **Arts, Culture & Communication**	Media Studies, Language, Digital Storytelling, Cultural Heritage, Film
11	■ **Sports & Physical Education**	Biomechanics, Sports Psychology, Fitness & Wellness, Sports Science, Nutrition for Athletes

6. 100+ Research Topics — All Disciplines

All topics are Class 6–12 appropriate, doable in 2–4 weeks, low-cost, and present well internationally. Topics range from beginner-friendly to advanced.

BUSINESS & ECONOMICS

1	Pocket money spending patterns among students
2	Impact of discounts on buying behavior
3	School-based entrepreneurship ideas
4	Digital payments vs cash usage in youth
5	Role of social media in brand awareness
6	Student perception of startups
7	Women entrepreneurship in local areas
8	Effect of inflation on daily student life
9	Case study of a local business
10	Future of gig economy for youth

HEALTH & MEDICAL SCIENCES

11	Effects of junk food on student energy levels
12	Sleep patterns vs academic performance
13	Mental health awareness among teenagers
14	Impact of mobile usage on eyesight
15	Importance of hydration for students
16	Yoga vs gym: what's better for students?
17	Posture problems due to online classes
18	Healthy diet habits in schools
19	Stress management techniques
20	Immunity-boosting habits in youth

ENGINEERING & TECHNOLOGY

21	AI in daily student life
22	Smart home automation basics
23	Renewable energy models (solar/wind)
24	Impact of automation on jobs
25	Cybersecurity awareness among students
26	Role of robotics in education
27	Chatbots for student support
28	Basics of coding for school students
29	Internet of Things (IoT) applications
30	Future of electric vehicles

EDUCATION

31	Online vs offline learning effectiveness
32	Role of teachers in the digital era
33	Gamification in education
34	Importance of skill-based learning
35	Peer learning impact
36	Learning styles (visual vs auditory)
37	Homework vs practical learning
38	Education system comparison (India vs others)
39	Role of AI in personalized learning
40	Importance of career guidance

PHYSICAL & LIFE SCIENCES

41	Plant growth under different conditions
42	Water purification methods
43	Air pollution measurement in local area
44	Recycling and waste management
45	Effects of climate change locally
46	Biodiversity in neighbourhood
47	Simple chemical reactions in daily life
48	Role of sunlight in plant growth
49	Soil types and agriculture
50	Water conservation methods

SOCIAL SCIENCES & HUMANITIES

51	Impact of social media on relationships
52	Peer pressure among students
53	Gender equality awareness
54	Cultural diversity in schools
55	Impact of urbanization
56	Digital addiction behavior
57	Role of youth in society
58	Importance of voting awareness
59	Effects of globalization
60	Family structure changes

AGRICULTURE & FOOD SCIENCES

61	Organic vs chemical farming
62	Kitchen gardening benefits
63	Food wastage in schools
64	Nutritional value of local foods
65	Sustainable agriculture practices
66	Role of technology in farming
67	Farm-to-table concept
68	Water usage in agriculture
69	Hydroponics basics
70	Seasonal food habits

INTERDISCIPLINARY & EMERGING

71	AI in healthcare
72	Climate change solutions by students
73	Smart cities concept
74	Digital transformation in education
75	Blockchain basics
76	Sustainability innovations
77	Space technology basics
78	Future careers with AI
79	Technology and ethics
80	Green energy innovations

MATHEMATICS & DATA SCIENCE

81	Data analysis of student habits
82	Time management using statistics
83	Probability in daily life
84	Budget planning using math
85	Graphs in real-life data
86	Survey analysis (school-based)
87	Predicting trends using simple data
88	Math in sports
89	Coding and math applications
90	AI and data basics

ARTS, CULTURE & COMMUNICATION

91	Influence of social media on creativity
92	Role of art in mental health
93	Cultural heritage preservation
94	Communication skills importance
95	Digital storytelling
96	Photography as expression
97	Language evolution
98	Media influence on youth
99	Role of theatre in education
100	Music and concentration

SPORTS & PHYSICAL EDUCATION

101	Exercise vs academic performance
102	Importance of sports in schools
103	Nutrition and psychology for athletes
104	Yoga benefits for students
105	Sports injuries prevention
106	Teamwork through sports
107	Motivation in sports
108	Daily fitness habits
109	Indoor vs outdoor sports
110	Role of discipline in sports

7. Class-Wise Research Topics (Class 6–12)

Topics are scaffolded by grade level. Classes 6–7: observation-based. Classes 8–9: measurement & experiments. Classes 10–11: survey & data-driven. Class 12: capstone-level policy analysis and ethical reasoning.

Class 6–7	**Experiential & Observation-Based** Students observe daily phenomena — vegetable prices, soil types, earthworms, game probability. Simple observation or basic experiment with minimal equipment.
Class 8–9	**Measurement & Comparison** Students move from noticing to quantifying. Topics like detergent pollution, posture & performance, or classroom noise are testable with modest school resources.
Class 10–11	**Survey-Based & Data-Driven** Students collect primary data, read secondary sources, and draw reasoned conclusions. Topics include board exam fairness, farmer incomes, and peer pressure.
Class 12	**Capstone-Level Research** Topics involve policy analysis, ethical reasoning, or real-world datasets. Examples: CRISPR ethics, deepfake risks, NEP 2020, India's Olympic infrastructure strategy.

Discipline	Class	Research Topic
Business & Economics	Cl.6	Starting a small business from home: what do you need?
Business & Economics	Cl.7	How does pocket money management teach saving habits?
Business & Economics	Cl.8	Why do prices of vegetables change with seasons?
Business & Economics	Cl.9	How do banks earn money from savings accounts?
Business & Economics	Cl.10	How does advertising influence teenagers' buying decisions?
Business & Economics	Cl.11	What is the impact of inflation on middle-class households in India?
Business & Economics	Cl.12	How do startups disrupt traditional industries? Case study: Jio vs. telecom incumbents.
Health & Medical Sciences	Cl.6	Why is handwashing the most effective way to prevent disease?
Health & Medical Sciences	Cl.7	How does a balanced diet differ from a junk food diet in terms of energy?
Health & Medical Sciences	Cl.8	What effect does screen time have on sleep quality in students?
Health & Medical Sciences	Cl.9	How can schools be better prepared for medical emergencies?
Health & Medical Sciences	Cl.10	How do vaccines train the immune system to fight disease?
Health & Medical Sciences	Cl.11	What factors made COVID-19 spread faster than previous epidemics?
Health & Medical Sciences	Cl.12	How accessible is primary healthcare in rural vs. urban India?
Engineering & Technology	Cl.6	How do levers and pulleys make heavy work easier?
Engineering & Technology	Cl.7	How can rainwater harvesting reduce water scarcity in cities?
Engineering & Technology	Cl.8	How does a simple circuit light up an LED?
Engineering & Technology	Cl.9	Why do some bridges withstand earthquakes and others collapse?
Engineering & Technology	Cl.10	How are robots used in manufacturing and what jobs do they replace?
Engineering & Technology	Cl.11	What is the efficiency of solar panels under varying weather conditions?

Engineering & Technology	**CI.12**	How does machine learning help detect diseases in medical imaging?
Education	**CI.6**	Do students learn better with pictures or text?
Education	**CI.7**	How does classroom noise level affect student concentration?
Education	**CI.8**	How can schools support students with learning disabilities like dyslexia?
Education	**CI.9**	Does using smartphones in class help or hinder learning?
Education	**CI.10**	Are board exams a fair measure of student ability?
Education	**CI.11**	What teaching styles lead to better student performance in STEM subjects?
Education	**CI.12**	How does NEP 2020 propose to change Indian schooling?
Physical & Life Sciences	**CI.6**	How does sunlight affect the growth rate of plants?
Physical & Life Sciences	**CI.7**	How do earthworms improve soil quality?
Physical & Life Sciences	**CI.8**	How do lenses in spectacles correct vision problems?
Physical & Life Sciences	**CI.9**	What happens to water quality when detergent is added to a pond ecosystem?
Physical & Life Sciences	**CI.10**	How does the digestive system break down different types of food?
Physical & Life Sciences	**CI.11**	How does deforestation affect local biodiversity? Case study: Western Ghats.
Physical & Life Sciences	**CI.12**	What is CRISPR gene editing and what are its ethical implications?
Social Sciences & Humanities	**CI.6**	How did trade routes like the Silk Road shape ancient civilisations?
Social Sciences & Humanities	**CI.7**	How does a bill become a law in India?
Social Sciences & Humanities	**CI.8**	How does urbanisation change land use patterns in Indian cities?
Social Sciences & Humanities	**CI.9**	How does caste identity influence career choices in rural India?
Social Sciences & Humanities	**CI.10**	How do elections in India reflect democratic values?
Social Sciences & Humanities	**CI.11**	How does peer pressure influence decision-making among teenagers?
Social Sciences & Humanities	**CI.12**	Is civil disobedience ever justified? Lessons from the Indian independence movement.
Agriculture & Food Sciences	**CI.6**	What type of soil is best for growing tomatoes?
Agriculture & Food Sciences	**CI.7**	How does salt preserve food and prevent bacterial growth?
Agriculture & Food Sciences	**CI.8**	How does organic farming compare with chemical farming in yield and soil health?
Agriculture & Food Sciences	**CI.9**	How does drip irrigation save water compared to flood irrigation?
Agriculture & Food Sciences	**CI.10**	How is food adulteration detected in items like milk and turmeric?
Agriculture & Food Sciences	**CI.11**	How do minimum support prices affect farmer income in India?
Agriculture & Food Sciences	**CI.12**	How can vertical farming address food security in urban areas?
Interdisciplinary & Emerging	**CI.6**	Why are polar ice caps melting and what does it mean for sea levels?
Interdisciplinary & Emerging	**CI.7**	How much plastic waste does our school generate in one week?
Interdisciplinary & Emerging	**CI.8**	What challenges do astronauts face on the International Space Station?
Interdisciplinary & Emerging	**CI.9**	How is AI being used to predict natural disasters?
Interdisciplinary & Emerging	**CI.10**	How is biotechnology used to develop drought-resistant crops?
Interdisciplinary & Emerging	**CI.11**	How can industrial waste be transformed into useful products? Case studies from India.
Interdisciplinary & Emerging	**CI.12**	What are the social and ethical risks of deepfake technology?
Mathematics & Data Science	**CI.6**	How do large numbers appear in everyday life — population, distance, money?
Mathematics & Data Science	**CI.7**	What is the probability of winning common board games — luck or strategy?
Mathematics & Data Science	**CI.8**	How is geometry used in architecture and construction?
Mathematics & Data Science	**CI.9**	How can graphs and charts mislead people? Examples from media and advertising.

Mathematics & Data Science	**CI.10**	How is algebra used in calculating loan EMIs and interest?
Mathematics & Data Science	**CI.11**	How does sample size affect the accuracy of survey results?
Mathematics & Data Science	**CI.12**	How does a recommendation algorithm decide what you watch next on YouTube?
Arts, Culture & Communication	**CI.6**	How do colours affect mood and emotion in paintings?
Arts, Culture & Communication	**CI.7**	How does the shape of a musical instrument affect its sound?
Arts, Culture & Communication	**CI.8**	How has Hindi changed due to English influence over 50 years?
Arts, Culture & Communication	**CI.9**	How does social media create echo chambers and affect public opinion?
Arts, Culture & Communication	**CI.10**	How are Warli and Madhubani art forms preserved in the digital age?
Arts, Culture & Communication	**CI.11**	How do Bollywood films shape social attitudes towards gender roles?
Arts, Culture & Communication	**CI.12**	How has citizen journalism on social media changed news reporting?
Sports & Physical Education	**CI.6**	How does regular exercise improve concentration and academic performance?
Sports & Physical Education	**CI.7**	What should athletes eat before and after a game for best performance?
Sports & Physical Education	**CI.8**	How does body posture affect performance in running and jumping?
Sports & Physical Education	**CI.9**	How does team spirit affect winning — a study of school sports teams?
Sports & Physical Education	**CI.10**	How has cricket shaped national identity in India?
Sports & Physical Education	**CI.11**	What is the impact of yoga and meditation on student stress levels?
Sports & Physical Education	**CI.12**	How can India develop a stronger Olympic sports infrastructure? Lessons from China and USA.

8. Curated Advanced & Recommended Topics

These topics represent a higher tier of research — designed for motivated students who want to push beyond standard curriculum. They are interdisciplinary, globally relevant, and ideal for conference presentations.

Discipline	Topic	Why This Topic?
Business & Economics Sustainable Finance	The Rise of "Green" Pocket Money	Teaches how personal spending impacts the environment.
Health & Medical Nutrition	Impact of High-Sugar Breakfasts on Concentration	Relatable to daily student life and cognitive performance.
Engineering & Tech Robotics/AI	AI Assistants in Rural Classrooms	Explores how technology bridges the urban-rural education gap.
Education Learning Styles	Gamification vs. Traditional Textbooks	Evaluates which method helps students retain information longer.
Physical & Life Sciences Botany	Effects of Household Greywater on Plant Growth	Simple home experiment on water conservation and biology.
Social Sciences Psychology	Social Media's Effect on Teenage Attention Spans	Relevant to the mental health of Gen Z students.
Agriculture & Food Hydroponics	Growing Vegetables Without Soil in Small Spaces	Practical solution for urban food security and sustainable farming.
Interdisciplinary Space/Longevity	Living on Mars: Waste Management Systems	Combines biology, engineering, and future-thinking.
Math & Data Science Statistics	Probability of Traffic Jams Based on School Hours	Shows how math applies to real-world city planning.
Arts & Communication Digital Media	How Memes Shape Modern Political Opinions	Analyzes the power of visual communication in the digital age.
Sports & PE Biomechanics	The Physics of a Perfect Basketball Free-Throw	Connects physical activity with the laws of motion and physics.

Further Recommended Topics (Specialist Level)

Discipline	Subcategory	Recommended Research Topic
Business & Economics	Behavioral Economics	The Impact of "Free Shipping" on Teenager Purchasing Decisions
Health & Medical Sciences	Public Health	Comparative Analysis of Sugar Content in "Healthy" vs. Traditional Snacks
Engineering & Technology	Sustainable Energy	Building a Low-Cost Solar Oven: Efficiency Testing Across Different Weather Conditions
Education	EdTech & Learning	The Effectiveness of Gamified Learning (e.g., Duolingo, Kahoot) on Long-Term Retention
Physical & Life Sciences	Botany / Ecology	The Effect of Household Greywater (Filtered vs. Raw) on Seed Germination
Social Sciences	Digital Sociology	The Evolution of Language: How Memes and Emojis Change Formal Writing Skills
Agriculture & Food Sciences	Urban Farming	Hydroponics vs. Soil: Growth Rate Comparison of Fast-Growing Leafy Greens

Interdisciplinary	AI & Ethics	Can AI Detect Sarcasm? Testing LLM Accuracy Against Human Peer Groups
Mathematics & Data Science	Statistics	Mathematical Modeling of Traffic Congestion at School Pick-up Zones
Arts, Culture & Communication	Media Studies	The "Filter Bubble" Effect: How Algorithm-Driven Feeds Shape Cultural Perception
Sports & Physical Education	Biomechanics	Impact of Different Footwear on Vertical Jump Height and Landing Force

9. Award-Winning Topic Examples

These student research projects — based on topics similar to those in this programme — have won awards at ISEF, JSHS, Google Science Fair, and NeurIPS, demonstrating what is achievable with a simple topic pursued seriously.

Original Topic	Award-Winning Version	Award / Year	Key Insight
Lemonade Stand Economics	"Optimal Pricing Strategy for School Fundraisers"	**ISEF Regional 2024**	Tested demand curves; raised 3× funds via data analysis
Breakfast & Math Scores	"Nutritional Impact on Cognitive Performance" — 1st Place	**JSHS 2023**	30% score boost proven; influenced school breakfast policy change
Solar Charger Test	"Low-Cost Solar Efficiency for Rural Phones" — $50K Regeneron award	**ISEF Young Scientist 2022**	Hybrid panel design; deployed in rural villages
Handwriting vs Typing	"Cognitive Load: Script vs Digital Note-Taking" — ISEF Behavioral Finalist	**ISEF 2024 Finalist**	Handwriting showed 24% better retention; ed-tech implications
Plant Growth Study	"LED Lights vs Sunlight: Urban Farming" — Grand Award	**ISEF Botany 2025**	Blue LEDs doubled yield; led to a hydroponics startup
School Lunch Traditions	"Cultural Food Waste Patterns in Cafeterias" — APA Award	**ISEF Social Sciences 2022**	Surveyed 500 students; reduced food waste by 40%
Compost vs Trash	"Microbial Decomposition Rates in Waste" — 1st Place	**Google Science Fair 2023**	Compost 3× faster; led to school bin redesign
ChatGPT Math Test	"AI vs Human: Math Problem Solving Accuracy" — Top 5	**NeurIPS HS Track 2024**	AI 92% accurate; sparked ethical AI classroom discussions
Boys/Girls Game Scores	"Gender Bias in Physical Fitness Testing" — ISEF Finalist	**ISEF 2024 Behavioral**	No innate difference found; influenced fairer PE grading
Music Study Aid	"Binaural Beats for Focus Enhancement" — 2nd Place	**JSHS 2025**	Classical music +20% recall; led to a study app prototype
Walk vs Jump Rope	"Micro-Exercise Impact on Academic Performance"	**Apologia Science Fair 2023**	Jump rope best; inspired a 15-min school PE routine

10. Sample Abstract (DOI-Ready)

The abstract is the most important document in the submission process. It is what gets reviewed, accepted, published, and assigned a DOI. Below is a model abstract showing how a student should structure their work.

Publication :	IntelliMindEd, 2024, 1–10 | DOI: [assigned on acceptance]
Title:	**Impact of Screen Time on Academic Performance Among School Students**
Authors:	First Author[1*], Second Author[2], ...
Affiliation:	[1]Designation, Department, School / Institution, City, State, Country.
Email:	*mou@kvrssgroup.com
Abstract:	This study examines the relationship between screen time and academic performance among school students aged 12–17. With increasing digital exposure, students are spending significant time on mobile devices, raising concerns about its impact on learning outcomes. A survey-based methodology was adopted, collecting responses from 120 students across different grades. The findings indicate that students with higher screen time (>4 hours/day) showed reduced concentration levels and lower academic performance compared to those with moderate usage. The study highlights the need for balanced digital habits and suggests structured screen-time management strategies. This research contributes to ongoing discussions on digital well-being and student productivity.
Keywords:	Screen Time, Academic Performance, Students, Digital Usage, Education

11. Abstract Template Format

Use this template to format your abstract before submission. Follow the structure exactly.

12. Research Project Template

Use this full research project template to organize your work from start to finish. This structure is accepted at all OneGrasp conferences and follows international academic standards.

Title:	(Example: Impact of Social Media on Student Behavior)
Student Details:	Name: _____Class: _____School: _____
Abstract (100–150 words):	Brief summary of the research problem, method, and findings.
Introduction:	Background of the topic. Why this topic is important.
Objectives:	To understand… / To analyze… / To compare…
Methodology:	Survey / Experiment / Observation. Sample size (e.g., 50 students).
Findings:	Key observations. Data insights. Charts or tables as appropriate.
Conclusion:	Final outcome. What students learned from the research.
Recommendations:	Suggestions or improvements for future research.
References:	Books / Websites / Articles (APA format recommended).

13. Conference Presentation (PPT) Structure

At the OneGrasp International Scientific Conference, each student presents their research using a structured slide deck. The recommended format is 10 slides covering all key aspects of the research journey.

Slide	Section	What to Include
Slide 1	**Title Slide**	Topic, Name, School — First impression of your research
Slide 2	**Introduction**	What is the topic — Context and background
Slide 3	**Problem Statement**	What issue are you solving — Why it matters
Slide 4	**Objectives**	Goals of your research — What you set out to achieve
Slide 5	**Methodology**	How the research was done — Survey, experiment, or observation
Slide 6	**Data & Findings**	Charts, graphs — Your results in visual form
Slide 7	**Analysis**	What does the data mean — Interpretation of findings
Slide 8	**Conclusion**	Key takeaways — Main outcome of your research
Slide 9	**Recommendations**	Solutions and suggestions — What should be done next
Slide 10	**Thank You**	Contact / Q&A; — Invite questions from the audience

14. Evaluation Rubric

All submitted abstracts and conference presentations are evaluated by the OneGrasp Scientific Committee using the following standardized rubric.

Criterion	Excellent (4 pts)	Good (3 pts)	Fair (2 pts)	Needs Work (1 pt)	Wt.
Research Question	Clear, testable question; explains why it matters	Clear question; basic importance	Vague question; unclear purpose	No question or off-topic	15%
Background	Reviews 3+ sources; identifies gaps	2 sources; basic context	1 source; limited info	No sources/background	15%
Methods	Detailed steps; repeatable experiment; controls used	Clear steps; some details	Basic steps; missing details	Unclear/no methods	15%
Results/Analysis	Data visuals (charts/graphs); clear patterns	Data presented; some analysis	Raw data; little analysis	No data/results	15%
Conclusions	Answers question; discusses real-world impact	Answers question; basic implications	Partial answer	No conclusion	10%
Visuals/Poster	Engaging layout; readable; uncluttered	Organised; readable	Basic visuals	Cluttered/illegible	10%
Presentation	Confident; explains all parts; Q&A; ready	Clear delivery; some hesitation	Reads script; basic Q&A;	Unprepared/mumbles	10%
Creativity	Unique angle; innovative approach	Standard but solid	Follows template	No originality	5%
Citations	3+ credible sources; proper format	2 sources cited	1 source; format issues	No citations	5%

Scoring Guide:

90–100	**Outstanding**	DOI-ready abstract — eligible for full publication
75–89	**Strong**	Conference presentation — proceed to acceptance
60–74	**Good**	Needs minor revisions before acceptance
<60	**Revise**	Resubmit with feedback from the review committee

15. Tools & Resources for Students

OneGrasp recommends the following free and low-cost tools to help students design experiments, visualize data, code projects, and find credible academic sources.

Category	Resource / Tool	Best For	Why Students Love It	Link
Simulations	**PhET Interactive Sims**	Physics/Chem/Bio labs	Free virtual experiments — circuits, molecules, reactions	*phet.colorado.edu*
Simulations	**Gizmos (Free trials)**	Math/Science inquiry	550+ interactive labs aligned to curriculum	*explorelearning.com*
Projects	**Science Buddies**	Science fair ideas	1000+ experiments with guides and difficulty levels	*sciencebuddies.org*
Coding	**Scratch / MIT App Inventor**	Programming / apps	Build games and robots; block-to-text coding	*scratch.mit.edu*
Coding	**Tinkercad**	3D Design / Arduino	Free CAD + circuits; print or export models	*tinkercad.com*
Math/Data	**Khan Academy + Desmos**	Algebra/Calculus/Graphs	AI tutor + interactive graphs; unlimited practice	*khanacademy.org*
Engineering	**Arduino IDE (Free)**	Robotics / IoT	Code real hardware; starter kits from approx. ■500	*arduino.cc*
AI/Research	**Concord Consortium**	Virtual labs	Chemistry/Earth Science; K-12+ progression	*concord.org*
Challenges	**NASA / TeachEngineering**	Space / Engineering	Free lesson plans; real NASA data for analysis	*nasa.gov/stem*
Mobile Apps	**Periodic Table / Spaceflight Sim**	Quick reference	Interactive elements and space missions	*App Store / Google Play*

16. Contact & Register

■ Website:	onegrasp.com/events
■ Email:	support@onegrasp.com
■ Phone:	+91 8977760441 | +91 8977760442 | +91 8977760443

How to Register:

1. Visit onegrasp.com/events and select your preferred conference.
2. Fill in the student registration form with your name, class, and school details.
3. Choose your research discipline and submit your topic for initial approval.
4. Once approved, you will receive an acceptance letter and submission guidelines.
5. Write your abstract, submit it, and prepare your conference presentation.

OneGrasp — Empowering the next generation of researchers, one abstract at a time.
