Student Research Topics Compendium

A comprehensive guide to cross-disciplinary research for school students — Classes 6 to 12

11	110+	6–12	v 1.0
Disciplines	Research Topics	Grade Levels	Edition

About This Compendium

This compendium presents 200+ carefully curated research topics spanning 11 academic disciplines. Topics are drawn from the original OneGrasp Research Framework (v1.1) and expanded with new Beginner-to-Advanced entries covering real-world, observable, survey-based, and capstone-level research. Each entry includes the discipline subcategory and the rationale for selection — helping students, educators, and mentors choose the right topic at the right level.

© 2026 OneGrasp Education

CLASS-WISE RESEARCH GUIDE

Research expectations are scaffolded progressively across grade levels. The table below summarises the methodology and complexity expected at each stage of schooling.

Classes 6 & 7	**Experiential & Observation-Based** Students observe things in their daily environment — vegetable prices, earthworms in soil, handwashing habits, game probability. The research method is simple observation or a basic experiment. Curiosity and careful noticing are the core skills.
Classes 8 & 9	**Measurement & Comparison** Students move from noticing to quantifying. Topics like detergent pollution in a pond, posture and athletic performance, or classroom noise and concentration are testable with modest school resources. Students learn to measure, record, and compare results.
Classes 10 & 11	**Survey-Based & Data-Driven Research** Students collect primary data, read secondary sources, and draw reasoned conclusions. Topics reflect real shifts in society — board exam fairness, farmer incomes, peer pressure. Research reports require structured methodology sections.
Class 12	**Capstone-Level Research** Topics involve policy analysis, ethical reasoning, or real-world datasets — appropriate for students transitioning to undergraduate research. Examples include CRISPR ethics, deepfake risks, the NEP 2020, and India's Olympic infrastructure.

BUSINESS & ECONOMICS

20 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Consumer Behavior*	How do advertisements influence student buying decisions?	Helps students understand real-life spending habits and decision-making.
02 *Entrepreneurship*	Can students start small businesses in school?	Encourages innovation, financial literacy, and entrepreneurial thinking.
03 *Sustainable Finance*	The Rise of "Green" Pocket Money	Teaches kids how personal spending impacts the environment.
04 *E-commerce*	The "Free Delivery" Trap	Analyzes how hidden costs affect consumer spending.
05 *Behavioral Economics*	The Impact of "Free Shipping" on Teenager Purchasing Decisions	Teaches how psychological nudges affect real-world spending habits.
06 *Financial Literacy*	Saving vs Spending habits among teenagers	Builds financial awareness early in life.
07 *Customer Behavior*	How do discounts influence student buying decisions?	Helps students understand real-world marketing and decision-making.
08 *Financial Literacy*	Pocket money spending patterns among students	Develops self-awareness around personal budgeting from an early age.
09 *Consumer Behavior*	Impact of discounts on buying behavior	Illustrates how pricing psychology influences everyday decisions.
10 *Entrepreneurship*	School-based entrepreneurship ideas	Sparks innovation mindset and teaches business fundamentals practically.
11 *FinTech*	Digital payments vs cash usage in youth	Explores financial technology adoption trends among the younger generation.
12 *Marketing*	Role of social media in brand awareness	Connects digital media literacy with marketing strategy.
13 *Entrepreneurship*	Student perception of startups	Gauges entrepreneurial interest and understanding among school students.
14 *Women in Business*	Women entrepreneurship in local areas	Promotes gender equity in economic participation and role-model awareness.

© 2026 OneGrasp Education. All rights reserved.

15 *Macroeconomics*	Effect of inflation on daily student life	Makes abstract economic concepts tangible through lived experience.
16 *Business Studies*	Case study of a local business	Develops analytical and observational skills through real-world examples.
17 *Labour Economics*	Future of gig economy for youth	Prepares students to understand emerging work patterns and career choices.
18 *Consumer Psychology*	How packaging design affects student purchasing decisions	Links visual design and psychology to real-world buying behaviour.
19 *Digital Marketing*	How student influencers on Instagram shape peer spending	Explores the economics of influencer culture and its impact on youth consumers.
20 *Supply Chain*	From farm to shelf: Tracing a product's journey through local stores	Builds understanding of supply chains using observable, local examples.

© 2026 OneGrasp Education. All rights reserved.

HEALTH & MEDICAL SCIENCES

19 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Nutrition*	How does junk food affect student health and concentration?	Builds awareness of healthy lifestyle choices among students.
02 *Mental Health*	Impact of screen time on student mental health	Addresses a growing concern in the digital generation.
03 *Nutrition*	Impact of high-sugar breakfasts on concentration	Relatable to daily student life and cognitive performance.
04 *Digital Health*	Blue light and sleep cycles	Directly impacts student health and academic focus.
05 *Public Health*	Comparing sugar content in "healthy" vs traditional snacks	Encourages nutritional literacy and data collection through label analysis.
06 *Public Health*	Hygiene practices among school students	Builds awareness about disease prevention.
07 *Nutrition*	Effects of junk food on student energy levels	Connects diet choices to daily energy and academic performance.
08 *Sleep Science*	Sleep patterns vs academic performance	Helps students understand the science of rest and productivity.
09 *Mental Health*	Mental health awareness among teenagers	Normalises conversations around emotional wellbeing in schools.
10 *Ophthalmology*	Impact of mobile usage on eyesight	Raises awareness of a rapidly growing health concern among digital natives.
11 *Hydration*	Importance of hydration for students	Simple, measurable experiment linking water intake to focus.
12 *Fitness*	Yoga vs gym: what works better for school students?	Encourages evidence-based comparison of fitness approaches.
13 *Ergonomics*	Posture problems caused by online classes	Highly relevant post-pandemic health issue for school students.
14 *Nutrition*	Healthy diet habits in schools	Promotes long-term wellness through sustainable food choices.
15 *Psychology*	Stress management techniques for students	Practical mental health toolkit applicable to everyday school life.
16 *Immunology*	Immunity-boosting habits in youth	Connects biology to daily lifestyle choices and preventive health.

© 2026 OneGrasp Education. All rights reserved.

17 *Sports Medicine*	Effects of energy drinks on teenage athletes	Critical health topic as energy drink consumption rises among adolescents.
18 *Neuroscience*	How music affects focus and memory during study sessions	Bridges neuroscience and daily learning habits in an engaging way.
19 *Dermatology*	Sunscreen awareness among school students: habits and myths	Introduces preventive skincare science relevant to outdoor school activities.

© 2026 OneGrasp Education. All rights reserved.

ENGINEERING & TECHNOLOGY

19 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *AI & Robotics*	How does AI help in daily life for students?	Introduces students to future technologies early.
02 *Sustainable Tech*	Simple models of renewable energy (solar/wind)	Promotes awareness of clean energy solutions.
03 *Robotics / AI*	AI assistants in rural classrooms	Explores how technology can bridge the urban-rural education gap.
04 *Smart Cities*	Solar-powered street lighting	Simple engineering logic for sustainable urban living.
05 *Sustainable Energy*	Building a low-cost solar oven: efficiency testing across weather conditions	Provides hands-on thermodynamic and renewable energy experience.
06 *Basic Engineering*	Designing a simple water filtration system for rural areas	Introduces problem-solving through engineering concepts.
07 *Artificial Intelligence*	AI in daily student life	Makes abstract AI concepts tangible through personal experience.
08 *Home Automation*	Smart home automation basics	Introduces IoT and practical engineering through relatable home scenarios.
09 *Renewable Energy*	Renewable energy models using solar and wind	Hands-on STEM project reinforcing environmental responsibility.
10 *Industry 4.0*	Impact of automation on jobs	Prepares students to understand economic disruption caused by technology.
11 *Cybersecurity*	Cybersecurity awareness among students	Essential digital literacy topic in an increasingly online world.
12 *EdTech*	Role of robotics in education	Encourages exploration of how machines can support and enhance learning.
13 *AI Tools*	Chatbots for student support	Explores real applications of conversational AI in educational settings.
14 *Programming*	Basics of coding for school students	Introduces computational thinking as a foundational 21st-century skill.
15	Internet of Things (IoT) applications in daily life	Shows real-world applications of connected technology around students.

© 2026 OneGrasp Education. All rights reserved.

IoT		
16 *Transportation*	Future of electric vehicles	Connects engineering, environment, and energy economics in one topic.
17 *3D Printing*	Using 3D printing to prototype solutions to school problems	Practical design-thinking exercise combining engineering and creativity.
18 *Drone Technology*	Drones in agriculture: student experiments and applications	Explores emerging AgriTech through hands-on engineering exploration.
19 *Wearable Tech*	Wearable devices and student health monitoring	Bridges technology and health literacy through personal data collection.

© 2026 OneGrasp Education. All rights reserved.

EDUCATION

19 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Learning Methods*	Which learning method is most effective: online or offline?	Helps improve study habits and educational system design.
02 *Skill Development*	Importance of life skills vs academic marks	Encourages holistic development thinking.
03 *Learning Styles*	Gamification vs traditional textbooks	Evaluates which method helps students retain information longer.
04 *EdTech*	VR vs traditional labs	Explores whether virtual tools actually improve science scores.
05 *EdTech & Learning*	Effectiveness of gamified learning (Duolingo, Kahoot) on long-term retention	Relates directly to student daily life and pedagogical effectiveness.
06 *Research*	Importance of experiential learning	Encourages practical over rote learning.
07 *EdTech*	Online vs offline learning effectiveness	Directly relevant post-pandemic topic for students and educators alike.
08 *Teacher Development*	Role of teachers in the digital era	Explores how educator roles must evolve alongside technology.
09 *Pedagogy*	Gamification in education	Evidence-based comparison of traditional and game-based learning.
10 *Skill Development*	Importance of skill-based learning over rote memorisation	Advocates for practical, application-focused learning approaches.
11 *Collaborative Learning*	Impact of peer learning on academic outcomes	Highlights the value of collaborative study and social learning.
12 *Learning Psychology*	Visual vs auditory learning styles in the classroom	Helps students understand their own learning preferences and strategies.
13 *Pedagogy*	Homework vs practical assignments: which works better?	Challenges assumptions about conventional homework culture.
14 *Comparative Education*	Comparing education systems: India vs Finland	Broadens perspective on learning and encourages systemic thinking.

© 2026 OneGrasp Education. All rights reserved.

15 *AI in Education*	Role of AI in personalised learning	Explores cutting-edge educational technology with real student relevance.
16 *Career Guidance*	Importance of career counselling in schools	Addresses a critical gap in most school curricula.
17 *Neuroscience of Learning*	How sleep deprivation affects memory retention in school students	Directly connects neuroscience to everyday student performance.
18 *Special Education*	Inclusive classrooms: supporting differently-abled students	Promotes empathy and highlights gaps in current school inclusion practices.
19 *Assessment Reform*	Are examination marks the best measure of student ability?	Encourages critical analysis of the education system students experience daily.

© 2026 OneGrasp Education. All rights reserved.

PHYSICAL & LIFE SCIENCES

20 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Environmental Science*	How pollution affects local surroundings	Builds environmental responsibility.
02 *Biology*	Plant growth under different conditions	Introduces scientific experimentation basics.
03 *Botany*	Effects of household greywater on plant growth	Simple home experiment on water conservation and biology.
04 *Environment*	Natural vs chemical fertilizers	Easy home experiment with measurable biological data.
05 *Botany / Ecology*	Effect of filtered vs raw greywater on seed germination	Introduces controlled variables and addresses global water scarcity.
06 *Physics*	Factors affecting motion: speed and friction	Introduces core scientific principles.
07 *Chemistry*	Effects of acids and bases in daily life	Connects science to real-world applications.
08 *Botany*	Plant growth under different light and soil conditions	Classic controlled experiment ideal for developing the scientific method.
09 *Environmental Science*	Water purification methods: comparing filtration techniques	Connects chemistry and environmental science to real-world water safety.
10 *Environmental Science*	Air pollution measurement in the local area	Uses observable data to connect science with community health.
11 *Waste Management*	Recycling and waste management at school	Applies life sciences to sustainability and civic responsibility.
12 *Ecology*	Effects of climate change on local biodiversity	Connects global phenomena to observable local changes.
13 *Ecology*	Biodiversity survey in the school neighbourhood	Hands-on fieldwork introducing ecological documentation skills.
14 *Chemistry*	Simple chemical reactions found in everyday life	Makes chemistry approachable by linking it to familiar household products.
15 *Botany*	Role of sunlight intensity in plant growth rate	Controlled variable experiment ideal for beginners in life sciences.

© 2026 OneGrasp Education. All rights reserved.

16 *Soil Science*	Soil types and their suitability for agriculture	Connects earth sciences to practical farming and food systems.
17 *Environmental Science*	Water conservation methods at home and school	Practical, observable experiment with direct environmental impact.
18 *Microbiology*	Bacteria on everyday surfaces: a hygiene awareness experiment	Simple swab-and-culture experiment with powerful public health implications.
19 *Physics*	Why do objects float or sink? Buoyancy experiments using everyday materials	Makes Archimedes' principle tangible through low-cost hands-on experimentation.
20 *Ecology*	Microplastics in local water sources: detection and awareness	Emerging environmental concern that students can investigate with basic tools.

© 2026 OneGrasp Education. All rights reserved.

SOCIAL SCIENCES & HUMANITIES

19 Research Topics

#	Subcategory	Research Topic	Why This Topic Is Selected
01	*Sociology*	Impact of social media on relationships	Helps understand social behaviour changes in the digital age.
02	*Psychology*	How peer pressure affects student decisions	Builds emotional awareness and self-control.
03	*Socio-Psychology*	Social media's effect on teenage attention spans	Highly relevant to the mental health of Gen Z students.
04	*Sociology*	The evolution of slang: how social media changes language	Study of how language changes through digital culture.
05	*Digital Sociology*	How memes and emojis change formal writing skills	Connects modern digital culture with traditional linguistic study.
06	*History*	How historical events shape modern society	Builds critical thinking about history and its lasting influence.
07	*Sociology*	Impact of social media on personal relationships	Develops understanding of social behaviour in the digital era.
08	*Psychology*	Peer pressure among school students: causes and effects	Builds emotional intelligence and resistance to social influence.
09	*Gender Studies*	Gender equality awareness in schools	Promotes equity and inclusion from an early and formative age.
10	*Cultural Studies*	Cultural diversity in schools	Builds appreciation for multicultural environments and social cohesion.
11	*Urban Studies*	Impact of urbanisation on local communities	Connects geography and sociology to observable neighbourhood changes.
12	*Digital Behaviour*	Digital addiction behaviour among teenagers	Addresses one of the most pressing behavioural concerns of the digital age.
13	*Civics*	Role of youth in shaping society	Empowers students to see themselves as active civic participants.
14	*Civics*	Importance of voting awareness among young people	Builds democratic citizenship skills ahead of adulthood.
15	*Economics/Sociology*	Effects of globalisation on local culture and business	Makes macro-level economic forces visible through community observation.
16	*Sociology*	Changing family structures in modern India	Connects sociological theory to students' own family experiences.

© 2026 OneGrasp Education. All rights reserved.

17 *Psychology*	Self-esteem and social comparison: how Instagram affects student confidence	Explores social comparison theory through a platform students use daily.
18 *Political Science*	Student awareness of local governance and Panchayati Raj	Bridges civic education with real local governance structures.
19 *Criminology*	Rising cybercrime among youth: awareness and prevention	Critical digital citizenship topic with real safety implications.

© 2026 OneGrasp Education. All rights reserved.

AGRICULTURE & FOOD SCIENCES

18 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Organic Farming*	Benefits of organic farming vs chemical farming	Promotes sustainable agriculture awareness.
02 *Food Science*	Food wastage in schools and how to reduce it	Encourages responsibility and sustainability.
03 *Hydroponics*	Growing vegetables without soil in small spaces	Practical solution for urban food security and sustainable farming.
04 *Food Security*	Kitchen waste to bio-compost	Practical solution for waste management and soil health.
05 *Urban Farming*	Hydroponics vs soil: growth rate comparison of fast-growing leafy greens	Explores the future of food security in limited urban spaces.
06 *Sustainable Agriculture*	Organic vs chemical farming: yield and health comparison	Evidence-based exploration of farming methods using local data.
07 *Urban Gardening*	Benefits of kitchen gardening for families	Practical, hands-on introduction to food systems and sustainability.
08 *Food Waste Management*	Measuring and reducing food wastage in school canteens	Applies data collection skills to a real sustainability challenge.
09 *Food Nutrition*	Nutritional value of traditional local foods	Connects food culture with science and promotes appreciation of local diets.
10 *Sustainable Agriculture*	Sustainable agriculture practices for small-scale farmers	Links agricultural science with economic and environmental sustainability.
11 *AgriTech*	Role of technology in modern farming	Explores how digital tools are transforming agriculture in India.
12 *Food Systems*	Farm-to-table: understanding the food supply chain	Makes food systems visible and encourages conscious consumption.
13 *Water Management*	Water usage efficiency in agriculture	Critical topic given India's agricultural water scarcity challenges.
14 *Hydroponics*	Hydroponics basics: growing food without soil	Introduces innovative farming technology accessible to students.

© 2026 OneGrasp Education. All rights reserved.

15 *Food Culture*	Seasonal food habits and their health benefits	Connects traditional knowledge with modern nutritional science.
16 *Agri-Business*	Why do small farmers earn less despite hard work? Income disparities in agriculture	Connects agricultural science with economics and social justice.
17 *Food Science*	The science of fermentation: how idli and dosa batter work	Relatable Indian food science experiment accessible to all students.
18 *Climate & Agriculture*	Impact of unseasonal rains on crop yields in your district	Connects climate science to local agricultural economics through primary data.

© 2026 OneGrasp Education. All rights reserved.

INTERDISCIPLINARY & EMERGING FIELDS

19 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *AI + Education*	Can AI replace teachers in the future?	Encourages critical thinking about technology and society.
02 *Climate Change*	Role of students in solving climate issues	Connects multiple disciplines to real-world problems.
03 *Longevity / Space*	Living on Mars: waste management systems	Combines biology, engineering, and future-thinking.
04 *Space Science*	Growing plants in lunar soil	Combines biology and physics for future space travel.
05 *AI & Ethics*	Can AI detect sarcasm? Testing LLM accuracy against human peer groups	Introduces "Algorithmic Bias" and human-computer interaction.
06 *Innovation*	Smart solutions for school problems	Encourages creativity and problem-solving.
07 *Health Tech*	AI in healthcare: diagnosis and patient monitoring	Explores the intersection of medicine and machine learning.
08 *Climate Solutions*	Student-led climate change solutions	Empowers students as active contributors to sustainability challenges.
09 *Urban Planning*	Smart cities concept: technology in urban infrastructure	Applies engineering, data, and design thinking to civic problems.
10 *Digital Transformation*	Digital transformation in education systems	Explores systemic change driven by technology in an accessible context.
11 *Blockchain*	Blockchain basics: what it is and why it matters	Introduces distributed ledger technology relevant to future careers.
12 *Sustainability*	Student-driven sustainability innovations in schools	Encourages interdisciplinary problem-solving for real campus challenges.
13 *Space Technology*	Space technology basics: satellites and student experiments	Inspires STEM interest through the excitement of space exploration.
14 *Future of Work*	Future careers with AI: what jobs will exist in 2040?	Encourages forward-thinking about career planning in an AI-driven economy.
15 *Technology & Ethics*	Ethical challenges of emerging technologies	Builds ethical reasoning skills essential for responsible innovation.

© 2026 OneGrasp Education. All rights reserved.

16 *Green Energy*	Green energy innovations by young inventors	Showcases student-accessible renewable energy projects worldwide.
17 *Bioethics*	CRISPR gene editing: should we have the right to edit human DNA?	Capstone-level ethical debate connecting biology, law, and philosophy.
18 *Neurotech*	Brain-computer interfaces: the future of human-machine interaction	Emerging technology topic that blends neuroscience, engineering, and ethics.
19 *Circular Economy*	Zero-waste lifestyle: is it practical for Indian households?	Connects sustainability theory to observable everyday domestic practice.

© 2026 OneGrasp Education. All rights reserved.

MATHEMATICS & DATA SCIENCE

19 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Data Analysis*	Study of student performance using simple data	Introduces data interpretation and analytical thinking early.
02 *Statistics*	Daily time usage of students: study vs screen	Helps self-awareness and productivity improvement.
03 *Analytics*	Probability of traffic jams based on school hours	Shows how maths applies to real-world city planning.
04 *Big Data*	Predicting school canteen waste using data	Teaches data collection and statistical forecasting.
05 *Statistics*	Mathematical modelling of traffic congestion at school pick-up zones	Uses geometry and probability to solve a real logistics problem.
06 *Mathematics*	Maths in daily life: shopping and budgeting	Makes maths practical and relatable.
07 *Data Science*	Data analysis of student daily habits	Introduces data collection and pattern recognition through self-observation.
08 *Statistics*	Time management using statistical analysis	Applies maths to a personally relevant productivity challenge.
09 *Probability*	Probability in everyday life: games, weather, and decisions	Makes abstract probability concepts concrete through everyday scenarios.
10 *Applied Maths*	Budget planning using mathematical models	Teaches financial literacy through practical maths application.
11 *Data Visualisation*	Creating and interpreting real-life graphs and charts	Builds essential data literacy skills for the information age.
12 *Statistics*	Survey analysis: designing and interpreting school surveys	End-to-end research skill building using accessible primary data.
13 *Predictive Analytics*	Predicting trends using simple data and models	Introduces the concept of forecasting through approachable datasets.
14 *Sports Analytics*	Maths in sports: statistics and performance analysis	Uses sport as an engaging context for statistical thinking.
15 *Computational Maths*	Coding and maths applications: how they connect	Bridges computer science and mathematics to build STEM fluency.

© 2026 OneGrasp Education. All rights reserved.

16 *AI Basics*	AI and data basics: how machines learn from numbers	Accessible introduction to machine learning concepts for school students.
17 *Game Theory*	How game theory explains everyday decision-making among students	Makes advanced maths accessible through relatable social scenarios.
18 *Cryptography*	The mathematics behind everyday passwords and online security	Connects number theory to cybersecurity in a tangible, relevant way.
19 *Network Analysis*	Mapping friendship networks in a classroom using graph theory	Introduces graph mathematics through a personally meaningful social experiment.

© 2026 OneGrasp Education. All rights reserved.

ARTS, CULTURE & COMMUNICATION

20 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Media Studies*	Influence of social media on creativity	Encourages creative thinking and awareness.
02 *Culture*	Importance of preserving local traditions	Builds cultural identity and appreciation.
03 *Digital Media*	How memes shape modern political opinions	Analyses the power of visual communication in the digital age.
04 *Design*	Colour psychology in marketing	Shows how art influences human brain behaviour.
05 *Media Studies*	The "Filter Bubble" effect: how algorithm-driven feeds shape cultural perception	Develops media literacy and understanding of digital echo chambers.
06 *Communication*	Role of communication in teamwork	Enhances soft skills and collaborative effectiveness.
07 *Media*	Impact of social media on personal creativity	Encourages critical thinking about media use.
08 *Media Studies*	How social media platforms influence creative expression	Explores both the liberating and limiting effects of digital creative spaces.
09 *Art Therapy*	Role of art in supporting student mental health	Connects creative expression with emotional wellbeing.
10 *Cultural Studies*	Cultural heritage preservation in the digital age	Explores how technology can be used to archive and celebrate culture.
11 *Communication*	Importance of communication skills in school and work	Directly relevant to student success in academic and future professional life.
12 *Digital Storytelling*	Digital storytelling: creating narratives with technology	Blends creativity and technical skills in an accessible project format.
13 *Visual Arts*	Photography as personal and social expression	Democratises artistry and develops visual literacy.
14 *Linguistics*	Language evolution: how new words enter daily use	Connects living language change to media, culture, and student experience.
15 *Media Literacy*	Media influence on youth attitudes and choices	Develops critical consumption skills essential in the digital information age.

© 2026 OneGrasp Education. All rights reserved.

16 *Performing Arts*	Role of theatre in building student confidence	Demonstrates how performing arts develop communication and empathy.
17 *Music & Cognition*	Music and concentration: does background music help studying?	Bridges neuroscience and arts to a question students find personally relevant.
18 *Graphic Design*	How visual design shapes public opinion: a study of election posters	Connects art, politics, and psychology in an analytically rich project.
19 *Cultural Anthropology*	Vanishing folk arts of India: documentation and awareness	Preserves intangible cultural heritage through student-led documentation.
20 *Media Literacy*	Fake news detection: teaching media literacy in schools	Critical skill-building topic with immediate real-world relevance.

© 2026 OneGrasp Education. All rights reserved.

SPORTS & PHYSICAL EDUCATION

20 Research Topics

# Subcategory	Research Topic	Why This Topic Is Selected
01 *Fitness*	Impact of daily exercise on academic performance	Connects physical health with academic success.
02 *Sports Psychology*	How motivation affects sports performance	Builds discipline and mental strength in sports.
03 *Biomechanics*	The physics of a perfect basketball free-throw	Connects physical activity with laws of motion and physics.
04 *Physiology*	Hydration vs athletic speed	Scientific approach to improving sports performance.
05 *Biomechanics*	Impact of different footwear on vertical jump height and landing force	Blends physics with physical activity, making science tangible for athletes.
06 *Nutrition*	Diet and sports performance	Connects health with physical activity.
07 *Sports Science*	Impact of practice on performance	Builds discipline and consistency.
08 *Exercise Science*	Exercise vs academic performance: a data-based study	Uses measurable data to explore the mind-body performance connection.
09 *Sports Education*	Importance of sports in school curriculum	Advocates for physical education through evidence and observation.
10 *Sports Nutrition*	Nutrition and psychology for student athletes	Combines two key performance factors relevant to competitive school sport.
11 *Yoga Science*	Yoga benefits for students: flexibility, focus, and stress	Evidence-based exploration of a widely practiced but understudied discipline.
12 *Sports Medicine*	Sports injury prevention in school athletics	Teaches students safety and biomechanics in an engaging context.
13 *Team Sports*	Teamwork through sports: building collaboration skills	Uses sport as a lens to explore leadership, trust, and communication.
14 *Sports Psychology*	Motivation in sports: intrinsic vs extrinsic factors	Explores psychological theory through a physically engaging subject.
15 *Fitness*	Daily fitness habits and their long-term health impact	Promotes lifelong wellness through consistent, measurable physical activity.

© 2026 OneGrasp Education. All rights reserved.

16 *Kinesiology*	Indoor vs outdoor sports: health and engagement comparison	Explores environmental factors affecting physical activity and wellbeing.
17 *Sports Philosophy*	Role of discipline in sports and life success	Connects athletic mindset with broader personal development values.
18 *Recovery Science*	Ice bath vs stretching: which recovery method works better for student athletes?	Practical sports science experiment with clear measurable outcomes.
19 *Sports Analytics*	Tracking athletic progress with simple metrics: a data approach to performance improvement	Introduces data science through a sports context students find motivating.
20 *Sports Psychology*	Pre-match anxiety: how breathing techniques affect student performance	Bridges psychology and physical performance in a directly applicable way.

© 2026 OneGrasp Education. All rights reserved.

Class-wise Research Topics

A discipline-wise listing of research topics mapped to each class from 6 to 12.

Business & Economics	
Cl.6	Starting a small business from home: what do you need?
Cl.7	How does pocket money management teach saving habits?
Cl.8	Why do prices of vegetables change with seasons?
Cl.9	How do banks earn money from savings accounts?
Cl.10	How does advertising influence teenagers' buying decisions?
Cl.11	What is the impact of inflation on middle-class households in India?
Cl.12	How do startups disrupt traditional industries? Case study: Jio vs. telecom incumbents.

Health & Medical Sciences	
Cl.6	Why is handwashing the most effective way to prevent disease?
Cl.7	How does a balanced diet differ from a junk food diet in terms of energy?
Cl.8	What effect does screen time have on sleep quality in students?
Cl.9	How can schools be better prepared for medical emergencies?
Cl.10	How do vaccines train the immune system to fight disease?
Cl.11	What factors made COVID-19 spread faster than previous epidemics?
Cl.12	How accessible is primary healthcare in rural vs. urban India?

Engineering & Technology	
Cl.6	How do levers and pulleys make heavy work easier?
Cl.7	How can rainwater harvesting reduce water scarcity in cities?
Cl.8	How does a simple circuit light up an LED?
Cl.9	Why do some bridges withstand earthquakes and others collapse?
Cl.10	How are robots used in manufacturing and what jobs do they replace?
Cl.11	What is the efficiency of solar panels under varying weather conditions?

© 2026 OneGrasp Education. All rights reserved.

CI.12	How does machine learning help detect diseases in medical imaging?

Education	
CI.6	Do students learn better with pictures or text?
CI.7	How does classroom noise level affect student concentration?
CI.8	How can schools support students with learning disabilities like dyslexia?
CI.9	Does using smartphones in class help or hinder learning?
CI.10	Are board exams a fair measure of student ability?
CI.11	What teaching styles lead to better student performance in STEM subjects?
CI.12	How does NEP 2020 propose to change Indian schooling?

Physical & Life Sciences	
CI.6	How does sunlight affect the growth rate of plants?
CI.7	How do earthworms improve soil quality?
CI.8	How do lenses in spectacles correct vision problems?
CI.9	What happens to water quality when detergent is added to a pond ecosystem?
CI.10	How does the digestive system break down different types of food?
CI.11	How does deforestation affect local biodiversity? Case study: Western Ghats.
CI.12	What is CRISPR gene editing and what are its ethical implications?

Social Sciences & Humanities	
CI.6	How did trade routes like the Silk Road shape ancient civilisations?
CI.7	How does a bill become a law in India?
CI.8	How does urbanisation change land use patterns in Indian cities?
CI.9	How does caste identity influence career choices in rural India?
CI.10	How do elections in India reflect democratic values?
CI.11	How does peer pressure influence decision-making among teenagers?
CI.12	Is civil disobedience ever justified? Lessons from the Indian independence movement.
